IMPRINTING GUIDELINES

Glove Guard LP has been imprinting on our unique products for over 20 years. We have seen many impressive logos and creative safety slogans and we can't wait to see what you have in mind.
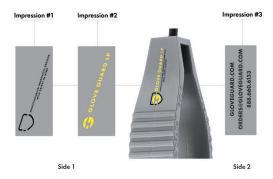

Products available for Imprints

Glove Guard®, Utility Guard®, Handi Klip®, Goggle Guard®, Utility Catcher®, and Oktolock® clips.

Imprinting Method

Glove Guard LP uses a pad printing method on all our clips. This means there is one impression for each color, per side. Printing a logo with two colors requires 2 plates and 2 impressions. The below diagram highlights the process.

What is an Impression?

An impression is the color transferred to the product. If the logo is 2 colors, printed on one side, there are 2 impressions. In the case of 2 sided imprints, the colors on the 2nd side are also additional impressions.

Impression #1   Impression #2   Impression #3

Side 1   Side 2

Logo Requirements

For all custom imprints, we ask that you email us a vector file (ai, eps) of what you would like imprinted. Doing so allows us to create a paper proof, and eventually, the plate(s) that will be used to imprint your clips. If you do not have an eps file, our graphics department can recreate your logo for an additional fee.

Imprinting space

Please keep in mind the amount of space available for imprinting. We ask that all fonts are greater than 6pt and lines are greater than 1 pixel. Below is an accurate representation of the space available for our glove clips and Goggle Guard® clip.

Color Option Limitations

1 Color Logo: Our Preferred Method which makes a crisp, clean, and repeatable print.

2 Color Logo: Great option for logos that are not too detailed. Special adjustments may be taken to make the imprint work.

3 Color Logo: This option is do-able but not recommended. Should you wish to pursue this option please keep in mind that adjustments may be made during the creation of your artwork. Not all 3 color imprints or fine detail logos will be possible.
